

IN THE CLAIMS:

Please amend Claims 1, 6, 10 and 15 to read as follows. Note that all claims currently pending in this application, including those not presently being amended, have been reproduced below for the Examiner's convenience.

1. (Currently Amended) An apparatus that displays images recorded by a camera, said apparatus comprising:

a reading device that reads information regarding a focus area used in image recording by the camera; and

an output device that outputs signals enlarging the images and display displaying the enlarged images based on the focus area information read by said reading device, such that the display displayed enlarged images are centered around the focus area used in image recording by the camera.

M&S*

2. (Previously Amended) An apparatus according to Claim 1, wherein the focus area information read by said reading device represents a position of the focus area used in the image recording by the camera.

3. (Previously Amended) An apparatus according to Claim 1, wherein said output device processes the images recorded by the camera so that a position of the focus area used in the image recording by the camera is centered in a display, and outputs signals for displaying the processed images.

4. (Previously Amended) An apparatus according to Claim 1, wherein said output device uses as a reference point a position of the focus area used in the image recording by the camera to enlarge the images recorded by the camera, and outputs signals for displaying the enlarged images.

5. (Previously Amended) An apparatus according to Claim 1, wherein said reading device includes a magnetic head that reads magnetic information recorded on a photographic film used in the camera.

C1/Cnt
6. (Currently Amended) An apparatus that displays images recorded by a camera, said apparatus comprising:

an image-capture sensor for capturing images optically recorded on a photographic film;

a reading device that reads information magnetically recorded on the photographic film; and

an output device that processes and outputs the images captured by the image-capture sensor to enlarge the images and to display the enlarged images by using the information read by said reading device, including information regarding a focus area used during image capture, such that the display displayed enlarged images are centered around the focus area used in image recording by the camera.

7. (Previously Amended) An apparatus according to Claim 6, further comprising a storage device that stores images captured by said image-capture sensor, wherein said output device processes and outputs images stored in said storage device.

8. (Previously Amended) An apparatus according to Claim 6, wherein said output device processes the images recorded by the camera so that a position of the focus area used in image capture is centered in a display, and outputs signals for displaying the processed images.

9. (Previously Amended) An apparatus according to Claim 6, wherein said output device uses as a reference point a position of the focus area used in image capture to enlarge the images recorded by the camera, and outputs signals for displaying the enlarged images.

10. (Currently Amended) A method for displaying images recorded by a camera comprising:

reading information regarding a focus area used in image recording by the camera; and

outputting signals to enlarging the images and display displaying the enlarged images based on the focus area information read in the reading step, such that the display displayed enlarged images are centered around the focus area used in image recording by the camera.

11. (Previously Amended) A method according to Claim 10, wherein the focus area information read in the reading step represents a position of the focus area in the image recording by the camera.

12. ((Previously Amended) A method according to Claim 10, wherein the outputting step includes processing the images recorded by the camera so that a position of the focus area used in the image capture is centered in a display, and outputting signals to display the processed images.

13. ((Previously Amended) A method according to Claim 10, wherein the outputting step includes using a position of the focus area used in the image recording as a reference point to enlarge the images recorded by the camera, and outputting signals to display the enlarged image.

14. ((Previously Amended) A method according to Claim 10, wherein the reading step includes reading magnetic information recorded on a photographic film used in the camera by a magnetic head.

15. (Currently Amended) A method for displaying images recorded by a camera comprising:

capturing images by an image-capture sensor, the images having been optically recorded on photographic film;

reading information magnetically recorded on the photographic film; and

processing and outputting the images captured by the image-capture sensor to enlarge the images and to display the enlarged images by using the information read in the reading step, including information regarding a focus area used during the image capture, such that the display displayed enlarged images are centered around the focus area used in image recording by the camera.

Claim 16
16. (Original) A method according to Claim 15, further comprising the step of storing images captured by the image-capture sensor, and wherein the processing and outputting step processes and outputs the stored images.

17. ((Previously Amended) A method according to Claim 10, wherein the processing and outputting step includes processing the images recorded by the camera so that a position of the focus area used in image capture is centered in a display, and outputting signals to display the processed images.

18. ((Previously Amended) A method according to Claim 10, wherein the processing and outputting step includes using a position of the focus area used in image capture as a reference point to enlarge the images recorded by the camera, and outputting signals to display the enlarged images.
